#### ▶ Browser

Provides access to tables and fields so that you can drag and drop into Excel to create reports.

#### ▶ Enhanced Link=

Create multiple links and nested links to any table in you want. Lets you build sophisticated reports quicker and easier.

#### ▶ Data Views

Simplify report creation in Report Builder with a relevant set of fields from multiple tables.

#### ▶ Data View Creator

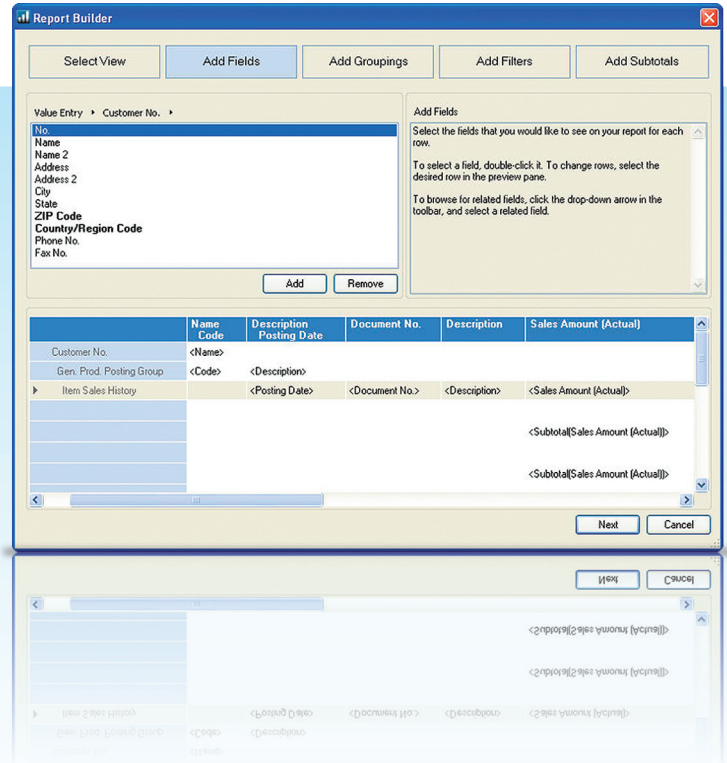

Easily create, edit, export/import, and combine tables into custom sets of fields from the NAV data dictionaries for use in Report Builder.

#### ▶ .NET Architecture

All new .NET modular architecture gives Jet 2009 easy integration and growth with latest technologies and developments.

#### ▶ High Performance

On average 2x faster than previous versions of Jet Reports.

### NEW - Report Builder

#### Build reports in minutes

- ▶ Create reports quickly using Data Views to simplify finding your data.
- ▶ Combine data from multiple areas of your database into one report.

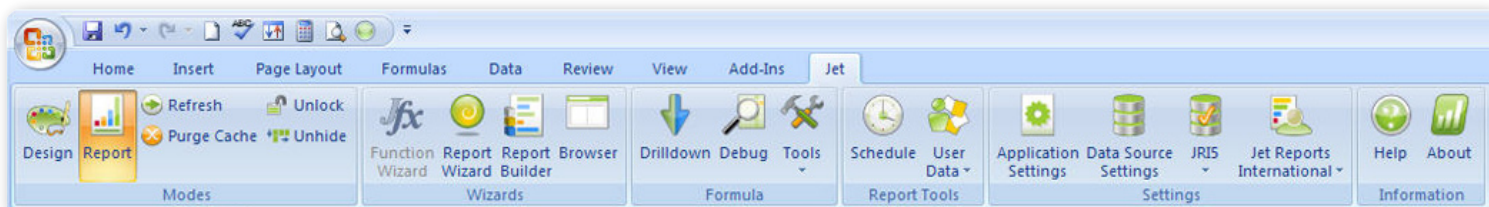

Report Builder lets you create many types of multi-table reports. Report Builder presents categories of information to you so you can choose data views that best represent the type of report you want. Select fields for your reports, set groupings and subtotals, set filters and set report parameters as report options. Get well formed reports in minutes.

Supports all customizations for vertical and custom applications

# Powerful reporting at your fingertips. All in Excel.

Jet Reports 2009 Excel Ribbon

## Jet Reports—The whole story

### Full Excel Support

Use all Excel functionality that you already know to build reports with impact and effectiveness.

- ▶ Add charts into your reports.
- ▶ Add formatting and conditional formatting to highlight the most relevant information.
- ▶ Add Excel functions for calculated numbers and what-if analysis right in the report.

Jet Reports supports all Excel calculations, date functions, formatting, conditional formatting, charting, validation and lists, PivotTables and more right in your reports. Jet Reports functions and wizards fully support Excel absolute and relative cell referencing. Use the Excel linking and grouping to do in-report drilldown of more data.

### Scheduler

Schedule reports for automatic distribution.

- ▶ Automate the refreshing and distribution of reports to your team.
- ▶ Show a summary of the report in the email body so people know the key information immediately.
- ▶ SMTP and Outlook support for email.

The scheduler allows you to schedule reports daily, weekly, monthly—on your schedule. You can set parameters in the reports to be automatically used by the scheduler. You can set the scheduler to send to a list of emails you determine. Use named ranges in the report to select key report information to show in the body of the email. The scheduler refreshes the reports using the schedule you set and parameters you define then the scheduler sends the report by email to your defined list of recipients.

### .NET Architecture

New platform based on the latest Microsoft technologies.

- ▶ Modular architecture for quicker vertical adaptations.
- ▶ .NET design for better integration with latest technologies.

Jet Reports tracks the latest technology developments to create the best possible Excel reporting on the market. .NET gives Jet Reports integration into technology stacks and new developments quickly and efficiently.

### High Performance

Achieve best performance possible with Excel based reporting.

- ▶ Report Builder insures best possible performance.
- ▶ Jet Reports supports Excel 2007 formula bar limits, row and column limits.
- ▶ Link= can speed up any multi-table report.

Jet Reports insures best practices for performance are in every Report Builder report. Training offers best practice techniques to those who want to learn more. Our knowledge base on our support site and information on the community site offer additional best practices to gain the most performance possible.

### Browser

Create reports with more detailed control leveraging your database expertise.

- ▶ Drag and drop fields right into Excel to build your report.
- ▶ See all tables and fields even customized tables and field and third party granules in the Browser.

Use the Browser to build those custom reports while not having to write formulas. The Jet Browser let's you drag and drop fields then you can edit the functions in Excel to get the report exactly the way you want it.

### Data Views

Simplify your view into your database with Data Views.

- ▶ Data Views are based on your NAV data dictionaries.
- ▶ Data Views list only the fields and connected tables you want to see.
- ▶ Edit, create, import/export and associate to data sources your Data Views to easily achieve your optimal report creation data.

Report Builder uses Data Views to present the best possible set of fields to users simplifying report creation. Users no longer have to worry about how they get to a field or gather fields from related tables. Data Views presents the relevant set of fields they need. Data Views can include customizations for verticle and custom applications.
